

RAZ EINI

Rishon LeZion, Israel | 053-432-1663 | razeini972@gmail.com | github.com/RazEini

PROFILE

Software Engineering student (Atuda, Afeka College) targeting cyber and intelligence roles, with applied offensive and defensive security experience across web, network, and cryptographic systems. Solved 25+ PortSwigger Web Security Academy labs covering SQL injection, XSS, and authentication bypass; built a real-time deep packet inspection tool for traffic analysis and threat detection; and implemented AES-128-GCM authenticated encryption from scratch. Comfortable in Linux environments (OverTheWire Bandit) and motivated to bring security-first thinking to a cyber-focused intelligence unit.

SECURITY & TECHNICAL SKILLS

- **Web Security:** SQL injection, XSS (reflected/stored/DOM), authentication & access-control flaws, vulnerability identification — practiced via 25+ PortSwigger Web Security Academy labs
- **Networking & Protocol Analysis:** Packet capture, inspection, and traffic analysis with Scapy; OSI/TCP-IP model; identifying unencrypted protocol exposure for threat detection
- **Cryptography:** Applied AES-128-GCM authenticated encryption, salting, hashing, and key derivation in a real project
- **Linux & Command Line:** Navigating Linux systems, file permissions, log analysis, and basic privilege-escalation concepts (OverTheWire Bandit wargame)
- **Languages & Frameworks:** Python, Java, Kotlin, JavaScript, HTML/CSS, Android (Jetpack Compose, MVVM), Firebase

PROJECTS

Network Packet Inspector (DPI) — *Python, Scapy*

- Built a real-time deep packet inspection tool to analyze local network traffic and identify unencrypted protocols (HTTP) that expose sensitive data, for threat detection and traffic analysis
- Used Scapy for raw socket manipulation and packet decoding, applying OSI/TCP-IP model knowledge to filter signal from network noise for security monitoring and reconnaissance

Secure Password Manager — *Python*

- Implemented AES-128-GCM authenticated encryption for a personal credential vault, with correct salting, hashing, and key derivation to avoid any “almosts” in security
- Built to understand encryption end-to-end rather than rely on third-party managers, reinforcing a security-first development mindset

E-Commerce Shop App — *Android (Java), Firebase*

- Built a full shopping app with real-time Firebase database sync, multi-device cart consistency, authentication, and a role-based admin panel for inventory management

Smart TaskFlow — *Kotlin, Jetpack Compose, MVVM, Firebase*

- Built a task manager with automated prioritization logic, gesture controls, and a Material 3 UI, using MVVM to keep business logic cleanly decoupled from complex UI state

EDUCATION

B.Sc. Software Engineering, Afeka College of Engineering

Academic Reserve (Atuda) “Amirim” Program — pre-service technological track, Expected Graduation: 2029

ADDITIONAL

- **Languages:** Hebrew (native), English (high level)
- **Interests:** Chess, competitive puzzle-solving (speedcubing)
